

# FREE ONLINE LESSONS

Fits **PEI** Curriculum Grades 4-12

Social Studies | Science | Health Education

## HOW IT WORKS

Each lesson is paired with an online quiz to solidify learning. Every time a student scores 80% or more, we donate a life-saving vaccine to UNICEF Canada. This enables students to directly connect their learning outcomes to a global context.

## CONNECT YOUR CURRICULUM TO GLOBAL CITIZENSHIP

Over 60 lessons developed by teachers and health professionals to engage digital-age students in learning and inquiry.

KBI is brimming with carefully curated lessons linked to science, health or social studies curricula on a wide range of poignant topics including:

- Cross-curricular research and inquiry
- Critical thinking and evaluating information
- Factors affecting global child health equity
- Canada's three levels of government
- Canada's interactions with the global community
- The spread of infectious diseases & outbreaks
- The body's defence system/immune system and how vaccines help
- Understanding how antibiotics work

Elders and story writers lead the development of Indigenous perspectives on KBI.

Program can be teacher-led or self-directed by students

"I love how well the Kids Boost Immunity site aligns to the science unit." *Deborah, Grade 8*

"A telling sign of student buy-in is when they continue to use the program and explore the site even after the activity is finished." *Heidi, Grade 7-9 Socials*

Public Health  
Agency of Canada

Agence de la santé  
publique du Canada

Ministry of  
Health

Kids Boost Immunity would not have been possible without the longstanding support of British Columbia's Immunization Promotions Working Group (IPWG). The IPWG membership includes the BC Ministry of Health, Public Health Association of BC, BC Centre for Disease Control, First Nations Health Authority, Fraser Health, Vancouver Coastal Health, Interior Health, Vancouver Island Health, Northern Health and the BC Pharmacy Association. Kids Boost Immunity relies on other funders and partners to help purchase UNICEF vaccines earned by students.

# KBI IS DESIGNED FOR COMPLEX LEARNING NEEDS AND THE LOCAL CURRICULUM

Lessons are created by health and education/curriculum specialists and work well in any classroom

All online lessons are developed by a team of experienced specialists in the areas of immunization, health, education and curriculum. This teacher resource is updated as new lessons are made available on the KBI website.

Reading level fits grade  
Lessons link to provincial curriculum

Your students will only receive lessons designed for their grade reading level. Pairing stronger and weaker readers beside each other works well.

Quizzes linked to global citizenship

Each lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80% on these quizzes. Students can retake the lesson quizzes as many times as they want until they earn the vaccine. All vaccines are made available to children in developing countries through UNICEF.

Links to PEI curriculum

- Gr. 7 & 8 Social Studies
  - ? Social Studies
- Gr. 5, 9 & 10 Science
  - Gr. ? Healthy Living

As teachers, we know the importance of making learning meaningful and relevant for students.

Immunization programs occur in PEI schools, and the impact on students' health is long lasting. Therefore, to make this a relevant experience for students, some of the lessons on KBI are designed to support learning during the ages when vaccines are given.

The school immunization schedule for PEI:

- Grade 6
  - Human papillomavirus
- Grade 6
  - Tetanus, diphtheria and pertussis (Tdap)
  - Meningococcal (meningitis)

# PREVIEW KIDS BOOST IMMUNITY LESSONS

## Want to try Kids Boost Immunity before registering?

You can see some sample lessons on [www.kidsboostimmunity.com](http://www.kidsboostimmunity.com) by clicking on **sample lessons**.

**You can also preview the student experience** by registering as a pretend student on our “teachers’ test team”. To do this click on the “Register” button at the top right and register as a student. You can use any name and password you’d like. This will be a temporary account, so don’t worry about remembering your name or password.

For the ‘Team Registration Code’, use **TryKBIHere** (note this is not case sensitive and trykbihere works as well).

You will be able to experience Kids Boost Immunity as a BC grade 6 student.

Please be aware that student accounts associated with this team are temporary and will be deleted periodically. In addition, vaccines earned for UNICEF on this team will not be included as part of KBI’s global vaccine counter.

# GETTING STARTED ON KIDS BOOST IMMUNITY

Please follow the steps below to get started on Kids Boost Immunity.

**KBI is easy to use. Within 5-10 minutes of registering, you'll understand how it works!**

## STEP 1

### Go to Kids Boost Immunity and register as a teacher

Go to [www.kidsboostimmunity.com](http://www.kidsboostimmunity.com). Create a teacher account by filling out a simple online form. Once your teacher email is verified we will approve your account. This one-time registration and approval usually takes about one business day.

## STEP 2

### Make a team

Create a team for your class. Teams will show up on leaderboards and you can compare your progress with other classrooms from across Canada.

## STEP 3

### Get your students to register

Take your students to Kids Boost Immunity where they complete a very simple online form. Students are automatically added to your team.

## QUESTIONS AND SUPPORT

You can find answers to frequently questions here:

[www.kidsboostimmunity.com/frequently-asked-questions](http://www.kidsboostimmunity.com/frequently-asked-questions)

Also, please refer to Appendix B - Navigating KBI for more detailed information.

**If you need further support please contact [info@kidsboostimmunity.com](mailto:info@kidsboostimmunity.com)**

# KBI CONNECTIONS to PEI CURRICULUM

This section provides connections to PEI curriculum outcomes that relate to content within Kids Boost Immunity (KBI) lessons. Teachers have developed and reviewed the lessons to ensure that KBI aligns with educational approaches. For example, KBI lessons promote critical thinking, inquiry, problem-solving, communication, and citizenship. **NOTE: Teachers find more curriculum connections than outlined here.**

## KBI Curriculum Links to PEI CRITICAL THINKING AND EVALUATING INFORMATION - MULTIPLE SUBJECTS (GRADES 4-12)

The Critical Thinking and Evaluating Information lessons for Kids Boost Immunity are aligned with multiple subjects within the PEI curriculum. These lessons provide examples of how inaccurate information can sway opinion, often by creating a sense of fear. A checklist evaluation method enables student to assess the trustworthiness of information sources. Other evaluation strategies include learning how to recognize personal bias and using a scientific approach to test ideas. For older grades there are lessons in creating hypotheses to prove themselves wrong, and also exploring correlation versus causation.

## KBI Curriculum Links to PEI SOCIAL STUDIES

### Grade 6 Social Studies

The Social Studies lessons for Kids Boost Immunity meet the following PEI outcomes for students:

- 6.3.1 Examine the effects of the distribution of wealth around the world
- 6.3.2 Examine selected examples of human rights issues around the world

Students may demonstrate their understanding of the responsibilities of global citizenship by taking age-appropriate action regarding a human rights issue.

### Grade 7 Social Studies

#### **Unit 1: Empowerment (p. 131-147)**

- 7.1.1 Explore the general concept of empowerment – identify groups that are disempowered in our society (local, national, and global)

#### **Unit 2: Economic Empowerment**

- 7.2.2 Explain that humans have basic needs that must be met o 7.2.2 Investigate and report on the poverty cycle Unit 5: Societal Empowerment
- 7.5.3 Take age-appropriate action on social issues in our society today
- 7.5.3 Compare a typical day of a woman in a poor urban neighborhood to a woman of privilege. NOTE this KBI comparison activity provides a video of a current example of “two mothers”, one less privileged than the other set in a developing country, it is not 1800s/1900s, however, it has relevance today

## KBI Curriculum Links to NS SCIENCE

### Science 5

#### **Life Science – Meeting Basic Needs and Maintaining a Healthy Body (p. 66-69)**

The Science lessons for Kids Boost Immunity meet the following PEI Science 5 outcomes for students:

- Describe the body's defenses against infections (302-7, 302-8)
- Describe examples of medical techniques and technologies developed by Canadians and other cultures that have contributed to the knowledge of body organisms, systems, and health issues (106-2, 106-4, 107-12, 107-14)

### Grade 9 and 10 Science

The focus of many scientific investigations (studies) is to determine the relationship between variables. Of interest to scientists is 1) Is there a relationship? 2) Is the relationship correlational? 3) Is the relationship causal? In correlational relationships, there is an association between the variables. However, it is not known whether or not one causes the other to occur. In causal relationships, one variable results in the response or occurrence of another in a consistent manner. Causal relationships can be complex such as is seen with chain reactions, biofeedback mechanisms, and biosphere nutrient cycles. Understanding cause and effect is an important step towards controlling or modifying the cause in ways that address a human need. Often, when a relationship between two variables is assumed to be causal, it is only correlational. Understanding the difference between these two concepts is a fundamental aspect of scientific literacy.

No Relationship, Correlational, or Cause and Effect?

- Smoking and cancer (causal)
- Genetically modified organisms (GMOs) and decrease in biodiversity (no relationship determined)
- Climate change and human activity (complex causal)
- **Vaccines and autism (no relationship)**
- Megadoses of vitamins and health (correlational)

The majority of scientists have integrity and protect the validity of science. However, there are some very famous cases of scientific fraud that have occurred when individuals violated the scientific code (e.g., Robert A. Millikan's experiment measuring the charge of an electron, Cyril Burt's study on limitability of intelligence, Wakefield's report on vaccines causing autism).

#### **S2 Evaluate, with support, if a reported idea or claim is scientifically reasonable.**

Achievement Indicators Students who have achieved this outcome should be able to

- a. use the following vocabulary appropriately: argument, bias, claim, evidence, opinion, pseudoscience, skeptical;
- b. demonstrate skeptical and critical thinking when presented with a claim supposedly based on science;

## KBI Curriculum Links to PEI SCIENCE Cont.

### Grade 9 and 10 Science Cont.

- c. demonstrate beginning awareness of the difference between inductive and deductive reasoning (i.e., recognize that inferences based on observations are not scientifically reasoned conclusions);
- d. rate the publishing medium in terms of reliability (e.g., blogs, Twitter, and Facebook are less reliable than university websites, textbooks, or scientific journals);
- e. assess the credibility of the source of the claim (e.g., scientist, corporation, lobbyist, journalist, marketer, politician) by considering their possible intent or bias (e.g., sells the product, funded by or belongs to a partisan group), and identifying any other “red flags” (e.g., inflated sense of expertise, overconfidence, lack of expertise in area); f. assess if the vocabulary is non-scientific (i.e., flamboyant, exaggerative, vague, colloquial, subjective, or emotive) or overstated (i.e., emphasizes words such as scientific, fact, proves, truth, evidence);  
Are there clues in the language being used that suggest it is not real science?  
What is the evidence being presented?
  - Citizenship
  - Communication
  - Personal-Career Development Creativity and Innovation Critical Thinking
  - Technological Fluency
- g. infer if the argument supporting the claim is scientific by considering if, for example, it is based on testing and data that has been verified by others, is supported by multiple lines of evidence, identifies possible sources of bias present when evidence was collected, keeps possible confounding variables that could have affected the conclusion consistent, is reasonable in consideration of well-established scientific “facts”;
- h. infer if the argument supporting the claim is non-scientific due to its use of testimonials, opinion, personal experience, miraculous claims, conspiracy theories, or results that cannot be repeated by others;
- i. conclude, with justification, if a reported idea or claim is scientifically reasonable.

#### Guiding Questions

- What is being claimed? Why is it important to be skeptical about claims that are too good to be true?
- Who is making the claim? What is their expertise? What is their possible motive or bias?

## KBI Curriculum Links to PEI HEALTH

### Health 5

#### **Personal Health**

Examine the impact of physical activity, nutrition, rest, and immunization on the immune system (W-5.1)

Review “How Your Immune System Fights Microbes” (Appendix) with students. Organize the information on a Tchart.

Parts of The Body How They Fight Disease

- Skin Keeps germs out of the body
- Have students brainstorm health practices that help maintain a strong immune system.
- Discuss important times when people get immunized (for example, as a baby, before going to school, before travelling to some countries).

### Health 6

#### **Personal Health**

Determine the health risks associated with the sharing of personal-care items (W-6.2)

### Health 8

#### **Sexual Health**

Describe symptoms, effects, treatments, and prevention for a common sexually transmitted infection (W-8.16)

## FOR GRADES 4-7 CROSS-CURRICULAR INQUIRY RESEARCH ASSIGNMENT

Students can choose from seven research topics on significant issues. These issues all relate to health trends and quality of life. To support students in their inquiry, each research task includes relevant lessons that have been developed from a variety of reliable, primary sources. Students have an opportunity to consider differing perspectives, as well as possible environmental, social, political, and economic factors. Despite the complexity of the topics, information is presented in an engaging and age-appropriate style. The research tasks are action-oriented, using a variety of presentational techniques for students to share their reflective understanding.

### Research Topics

There are seven research topics to choose from:

- 1 - Create a virtual tour of municipal, provincial, and federal government services related to keeping you safe from infectious diseases.
- 2 - Describe the actions you think we should take to eliminate global inequality in immunization.
- 3 - If you were prime minister, how would you solve the issue of misinformation?
- 4 - Create a poster of some of the things you can do to keep yourself healthy from diseases.
- 5 - As an evil villain, you just got caught promoting a campaign trying to get everyone as sick as possible, and now have to write an apology letter explaining to the world why this was wrong.
- 6 - An Indigenous story writer worked with Elders to share stories about Turtle Island. Explore the themes in these stories.
- 7 - Create a world map highlighting some of the impacts of infectious diseases.

Support materials for a number of the research topics are provided in Appendix A - Worksheets & Marking Rubrics, pages 42-54. As more are added, this KBI Teacher Resource will be updated on the KBI website.

SUPPORTING LEARNING	ASSESSMENT
This research assignment would work well both as a starting point and as a culminating activity after students have been through the socials lessons. Each of the seven topics has an activity that students will complete. There are grade appropriate options for ways students can demonstrate their learning. As noted above, please see Appendix A for support materials. As more are added, we will update this KBI Teacher Resource on the KBI site.	<p>A number of marking rubrics are provided in Appendix A. As more are developed, we will update this KBI Teacher Resource on the KBI site. Please use or adapt as needed.</p> <p>This assignment does not have a quiz. Therefore, no vaccines can be earned.</p>

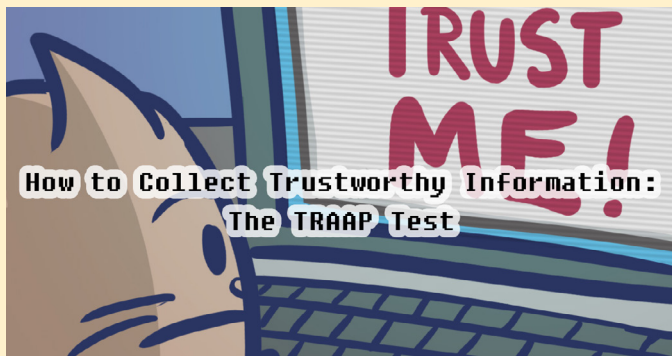

## FOR GRADES 4-12

### THE POWER OF THE STORY

This lesson uses a discovery learning approach with three short news stories (adapted from real anti-vaccine information found online) that sound extremely terrifying, only to discover that this is about a common object they use every day: a pencil. The purpose is to illustrate how easy it is to create misinformation on the internet, and how easy it is to be swayed emotionally to become afraid of a common object. Through the quiz questions, students are introduced to the idea that learning to evaluate sources of information is an important skill to develop.

SUPPORTING LEARNING	ASSESSMENT
Explain how easy it is to post information online. Also explain how easy it is to become swayed by what you read, especially things about health.	After reading the “fake” stories students reinforce/test understanding of how information can be misrepresented. This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

## FOR GRADES 4-7

### HOW TO COLLECT TRUSTWORTHY INFORMATION: THE TRAAP TEST

The TRAAP checklist is an evaluation method that helps you know where and how to find trustworthy information. The TRAAP checklist is so called because each letter stands for something you should look for in reliable information: **T**imeliness, **R**elevance, **A**ccuracy, **A**uthor, and **P**urpose (TRAAP).

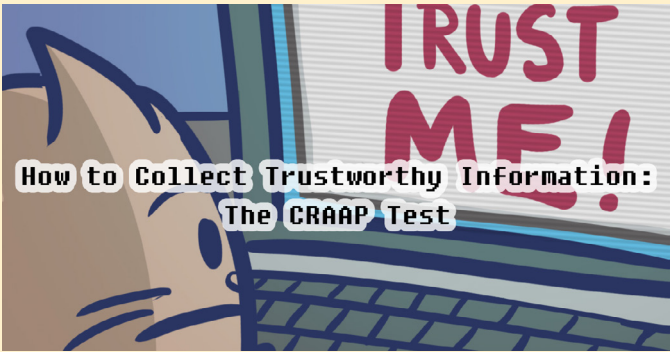

An 11-minute video, “Evaluating Websites (for Elementary students)” developed by the Oregon School Library Information System.

SUPPORTING LEARNING	ASSESSMENT
Explain how easy it is to post information online and to become swayed by what you see, hear or read. That is why it helps to have a way to check whether the information we find is trustworthy.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

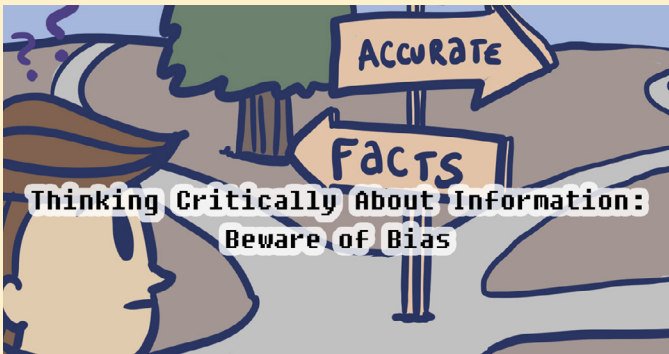

FOR GRADES 8-12  
 HOW TO COLLECT TRUSTWORTHY  
 INFORMATION: THE CRAAP TEST

A 2-minute video explains in simple language how to evaluate information using a checklist to test: **C**urrency, **R**elevance, **A**uthority, **A**ccuracy, and **P**urpose (CRAAP). It was created by SenecaLibraries for educational purposes and shared through Creative Commons Attribution licence. A 5-minute video developed by the Academy of Art University, San Francisco, CA, provides a more detailed explanation of the CRAAP evaluation method. This video is widely used by high schools and post-secondary institutions throughout North America.

SUPPORTING LEARNING	ASSESSMENT
Explain how easy it is to post information online and to become swayed by what you see, hear or read. That is why having a method to check the information is beneficial. It does not take long to become trained in recognizing unreliable information, and to keep looking for better sources/websites.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

FOR GRADES 4-12  
 THINKING CRITICALLY ABOUT  
 INFORMATION: BEWARE OF BIAS

Web article describes one of the thinking errors known as bias. The article describes different examples of how bias can make it hard to accept new information that doesn't agree with what we already believe.

SUPPORTING LEARNING	ASSESSMENT
There are ways to introduce bias in an age-appropriate manner. For example, students can consider whether they have ever tried to convince others to agree with their opinion. Ask them to consider movies, games, music, sport/physical activities, clothes, etc. Have them pair-up and try to convince their partner to like something they like. It will be easy if the person already has the same opinion, but if not, it may be much more difficult.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

## FOR GRADES 4-12 HOW TO TEST IDEAS BY CREATING EXPERIMENTS: THE SCIENTIFIC METHOD

A web article looks at how to test ideas using the scientific method. It explains the six steps of the scientific method using a story about dangerous pencils as an example.

A 7-minute video, "The SCIENTIFIC METHOD (Elementary Version)" developed by LombardiLabs.

SUPPORTING LEARNING	ASSESSMENT
Explain that using a scientific method to test ideas helps us think more critically, rather than going on "gut feelings" alone.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

## FOR GRADES 8-12 THINKING CRITICALLY ABOUT EXPERIMENTS: TRY TO PROVE YOURSELF WRONG

A web article starts with a video that challenges people to find the pattern 'rule' in a list of three numbers to illustrate how we can fall into the "thinking trap" of trying to fit new information into established patterns or ways of thinking and prove ourselves right.

A 4-minute video, "Can You Solve This?" developed by Veritasium.

This lesson uses the example of the Michelson-Morley experiment (about light waves) to describe how important it can be to test our hypotheses.

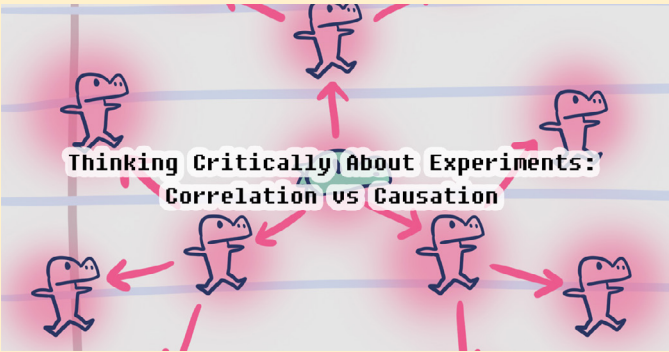

A 4-minute video, "Neil deGrasse Tyson explains the Michelson-Morley experiment excerpt from UNDAUNTED" from Future Science Media.

SUPPORTING LEARNING	ASSESSMENT
Explain that if we really want to think critically, we need to examine an opposite point of view to see if it has any merit.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

FOR GRADES 8-12  
 THINKING CRITICALLY ABOUT  
 EXPERIMENTS: CORRELATION VS  
 CAUSATION

This web article is about how to make good hypotheses about the patterns we see in the world. It uses examples to show how correlation is different from causation, and how we need to investigate so we don't mistakenly see causation in things that are related to each other in other ways.

SUPPORTING LEARNING	ASSESSMENT
In this lesson, students will learn how to make good hypotheses, and how to avoid being tricked into making bad ones. Explain that there are three different ways that correlation can be misleading, and that correlation does not always mean causation.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 4-12****WHAT IS GLOBAL INEQUALITY?**

This web article explains the meaning of global inequality in childhood immunization and why this is happening. An infographic from UNICEF shows that 2.5 million children's lives are saved by vaccines but still 1.5 million children die because they are not given life-saving vaccines.

There is a 3-minute video called "If the World Was Only 100 People" by Knovva Academy.

There is also a 5-minute video called "Global Issues: Health" by 100 People Foundation.

SUPPORTING LEARNING	ASSESSMENT
<p>Explain how students are helping to save the lives of children in developing countries by answering quiz questions on KBI. Read over the web article together. Have students list the three main reasons that children don't get vaccines. These are:</p> <ul style="list-style-type: none"> <li>• Lack of funding and poverty</li> <li>• Misinformation</li> <li>• War and violence</li> </ul>	<p>This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.</p>

**FOR GRADES 4-12****LACK OF FUNDING AND POVERTY**

A web article explains what it takes to make vaccines and get them to children in isolated areas far from health facilities. Vaccines have to stay cold while being delivered, which creates another challenge. There are two videos from UNICEF:

- A 4-minute video showing the long journey vaccines take in Chad, a large country in Africa.
- A 2-minute video of two South African mothers trying to get their children vaccinated shows unequal access to vaccines.

An infographic from Gavi (Global Alliance of Vaccines and Immunizations) shows how vaccines help prevent poverty in some areas of the world.

SUPPORTING LEARNING	ASSESSMENT
<p>Explain how children do not always have the same health-care in some countries. The three videos show how hard it can be to get vaccines to children in rural and remote places. Also, when people become ill (from diseases that could have been prevented by a vaccine), they are not as able to work and live a healthy and happy life. In fact, millions of people live in poverty because of having diseases they could have avoided had they been able to get vaccinated.</p>	<p>This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.</p>

## FOR GRADES 4-5 6-12

### MISINFORMATION AND POLIO

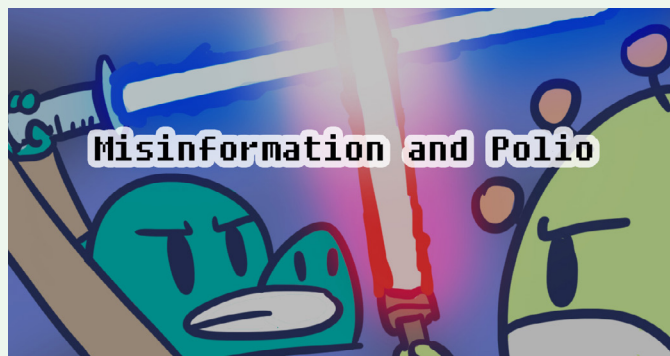

There are age-appropriate versions of this lesson for grades 4-5, and grades 6-12.

A web article describes what polio is and how misinformation is making it difficult to immunize children in some places. A UNICEF video shows religious leaders in Pakistan who taught people that the polio vaccine was not dangerous but life-saving.

A 1-minute video, "Polio Survivor Dennis Ogbe" from Rotary International (shown to grades 4 and 5).

A 7-minute video, "The Last Few Polio Survivors – Last of the Iron Lungs" from Gizmodo (shown to grades 6-12).

A 3-minute video, "Religious leaders help in changing misconceptions about the polio vaccine" from UNICEF (shown to grades - 4-12).

SUPPORTING LEARNING	ASSESSMENT
Ask students to share examples of misinformation. Explain that the religious leaders in this Pakistan community decided to stop misinformation by educating people about the life-saving benefits of the polio vaccine.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

## FOR GRADES 4-5 6-8 9-12

### WAR AND VIOLENCE

There are age-appropriate versions of this lesson for grades 4-5, grades 6-8, and grades 9-12.

A web article describes the war in Syria, how people there have been affected by war (people killed and displaced) and its effects on children, and how the war lowered the vaccination rate from 80% to 43% in three years (2010-2014). During war people lose their possessions and cannot access information. Vaccines are also either unavailable or health workers have difficulty getting to the people to immunize them.

This includes an aerial image of areas of a neighbourhood damaged or destroyed by violence.

4-minute video, "This Is Home: Children Document Life in Largest Syrian Refugee Camp" from ABC News (grades 4-5 only).

5-minute video, "The war in Syria explained in five minutes" from Guardian Animations (grades 6-12).

3-minute video, "Syrian kids explain the war" from BBC News (grades 9-12).

6-minute video, "Saving Kids From Polio in Islamic State Territory" from National Geographic. This National Geographic video shows the difficulty health workers face when trying to get polio vaccines to children in Syria.

**WARNING:** Please review the video before showing to your students as the gunfire and situations presented are graphic and real. This video was made by journalists in war-torn Syria (grades 4-12).

SUPPORTING LEARNING	ASSESSMENT
Introduce the lesson by explaining war and violence is unknown to us here in Canada; however, this is not the case in Syria.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 4-12**  
**HELPING STOP INEQUALITIES IN**  
**CHILDHOOD IMMUNIZATION**

A web article explains the different organizations provincially, nationally, and internationally that help support better health for children around the world with a focus on immunization. There is a 3-minute video on WHO UNICEF and Gavi (Global Alliance for Vaccines and Immunizations ), organizations that support immunization efforts.

SUPPORTING LEARNING	ASSESSMENT
The literacy level is most appropriate for grades 6 and up; however, this lesson topic is covered in some grade 4 and 5 curricula. Please adapt as needed for your classroom. Explain how students are helping children in developing countries receive vaccines, and helping save lives by answering quiz questions on KBI related to global quality of life.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

## FOR GRADES 4-7 11-12 CANADA'S THREE LEVELS OF GOVERNMENT

Imagine starting a society from scratch. What are the things that need to be considered for a society to work? In Canada, there are three levels of government: Municipal, Provincial/Territorial, and Federal. Some areas have overlap from one level to another, and examples related to health are used to illustrate this.

A 3-minute video, "The Levels of Government" from Student Vote, a program from CIVIX.ca.

SUPPORTING LEARNING	ASSESSMENT
Brainstorm with students about what sort of considerations would be involved in starting a society from scratch. Explain that they are going to learn how government works.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

## FOR GRADES 4-7 11-12 THE MUNICIPAL GOVERNMENT

The municipal government mostly deals with matters that affect local cities/towns.

For example:

- Public Parks
- Libraries
- Social Services
- Local Police and Fire
- Garbage and Recycling
- Public Transportation
- Water and Sewage
- Public Health

SUPPORTING LEARNING	ASSESSMENT
Ask students to think of services that are offered from the local government. Perhaps they use a local recreation centre or have been to a local health clinic.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

## FOR GRADES 4-7 11-12

### THE PROVINCIAL/TERRITORIAL GOVERNMENT

The provincial government mostly deals with matters that affect a province/territory. The provincial legislatures are limited to the powers that are explicitly given to them in the Constitution. They are not allowed to take over powers given to the federal government. Provincial government matters include:

- Education
- Road Signs
- Lottery
- Tourism
- Transportation
- Driver's License
- Provincial Parks
- Marriage Certificates
- Birth Certificates
- Energy (such as electricity)
- Health Care

SUPPORTING LEARNING	ASSESSMENT
The literacy level is most appropriate for grades 6 and up; however, this lesson topic is covered in some grade 4 and 5 curricula. Please adapt as needed for your classroom.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

## FOR GRADES 4-7 11-12

### THE FEDERAL GOVERNMENT

The federal government deals with matters that affects everybody in Canada. They are not allowed to take over powers given to the provincial government. Federal government matters include:

- Global Affairs
- Criminal Law
- Canadian Currency (money)
- Army
- Canada Post
- Citizenship
- Copyrights
- Civil Rights
- Fisheries
- Royal Canadian Mounted Police (RCMP)
- Old Age Pensions

SUPPORTING LEARNING	ASSESSMENT
Explain that the Federal Government is at the national level, meaning Canada-wide. Kids Boost Immunity is funded nationally by the Public Health Agency of Canada, so it has to be made available in every province and territory.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 4-12**  
**CANADA'S INTERACTIONS WITH THE GLOBAL COMMUNITY – WORLD HEALTH**

Canada is part of a global community that is made up of about 200 countries and over 7.5 billion people. In this shared world community, many factors affect health. Factors explored in this lesson include geographical, environmental, political, economic, and social aspects of health.

SUPPORTING LEARNING	ASSESSMENT
Grades 4-6 students may need some background to understand the terms geography, environment, politics, the economy and social aspects of health. For example, bullying is an issue many will know about. Review the lesson for appropriate reading level for these younger grades. It works well to pair stronger and weaker readers.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 4-12**  
**READING A MAP: LATITUDE AND LONGITUDE**

Looking at data can help you find patterns in health issues and understand which factors might be causing them. This web article explains how to identify a location on a map using latitude and longitude. Examples of data from a global perspective are presented through a series of world maps. A number of health-related factors are shown such as climate, gross national income (GNI), diabetes, and others.

SUPPORTING LEARNING	ASSESSMENT
Explain that learning about longitude and latitude is important because these coordinates are used in many ways.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 4-12****WHY GLOBAL HEALTH ISSUES REQUIRE COOPERATION**

This lesson includes a student research activity. A web article explains how solutions to health issues require a cooperative effort from governments, non-government organizations (NGOs), international groups, and individuals working together to help keep everyone healthy. The World Health Organization has identified the top ten world health threats. Students are asked to choose one of these to investigate further, and to think of ways that they as individuals can help fight the specific global health threat. Some guiding sentences are provided to help focus students in their investigation.

SUPPORTING LEARNING	ASSESSMENT
Brainstorm as a class about global news topics anyone has read or heard about recently. Ask students to see whether any of these relate to the top ten world health threats that they will read about in this lesson. For example, air pollution and climate change, war, flu or other epidemics.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 4-12****WHY DID THE WORLD HEALTH ORGANIZATION DECLARE VACCINE HESITANCY AS A TOP 10 ISSUE?**

A web article exploring one of the top ten world health threats, which is "Vaccine Hesitancy". Questions are answered related to what vaccines do, and how they work.

A 4-minute TedEd video, "How we conquered the deadly smallpox virus" by Simona Zompi.

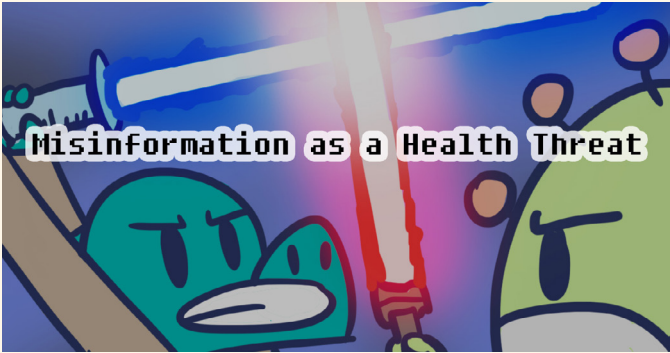

Myths and facts about vaccines are presented. For example, whether vaccines are made with safe ingredients, and whether vaccines cause autism.

A 7-minute video, "Debunking AntiVaxxers" by ASAP-Science. This episode is sponsored by Bill and Melinda Gates.

SUPPORTING LEARNING	ASSESSMENT
It is common for people to have concerns about vaccines. Discuss the pros and cons of vaccinations as a class. Then have students do the lesson to learn the facts about some of the myths surrounding vaccines. After the lesson, ask if this information has helped provide some clarification.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 4-12**  
**MISINFORMATION AS A**  
**HEALTH THREAT**

Interactive web article presenting a true misinformation story about dihydrogen monoxide (DMHO) with a 4-minute video, “We Need to Ban This” by Reagan Wolf. After watching the video, students select whether they agree that DMHO is dangerous, or disagree and believe it is safe. Misinformation caused city councillors in a town in Orange County, California, to be fooled about DMHO, as presented in a news article by World Dispatch US news. The ease with which we can be fooled by misinformation is compared to that which is causing one of the top ten global health threats around vaccine hesitancy. This is comically

SUPPORTING LEARNING	ASSESSMENT
Explain that “misinformation” means false or inaccurate information, especially that which is deliberately intended to deceive. Ask students to share any examples they have of misinformation. Then introduce the lesson by saying that even those in leadership positions can be fooled by misinformation.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 4-12**  
**MEASLES, THE COMEBACK KID**

A web article explaining how measles, which was eradicated in Canada in 1998, is now a serious health issue, not only here in Canada but in other parts of the world. The World Health Organization (WHO) reported that in 2017 there were 110,000 deaths globally, mostly among children under the age of five. News headlines from The UK Guardian and NBC News show that measles is a top news issue. In Canada and Europe, vaccine misinformation has some parents choosing not to protect their children against measles and other vaccine preventable diseases. A 5-minute video, “Measles Explained - Vaccinate or Not?” by Kurzgesagt, sheds light on the topic.

SUPPORTING LEARNING	ASSESSMENT
Explain to students that for much of the 20th century (1900s), diseases such as polio, measles, and whooping cough were fairly common, causing serious health problems. Measles is now back, and it is important to learn about why that is and what we can do about it.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

## FOR GRADES 4-12

### CANADA'S RESPONSE TO VACCINE HESITANCY AT HOME

A web article provides information about health organizations whose job it is to make sure that accurate information is made publicly available. The term "health authority" is explained. A group that is fighting vaccine misinformation is BC's First Nations Health Authority.

A 7-minute video from CBC News, Calgary, presents an interview with the national manager of Kids Boost Immunity, Ian Roe, about the program. Ian talks about the many lessons related to provincial curriculum outcomes in health, social studies, and science for grades 4-12.

SUPPORTING LEARNING	ASSESSMENT
Explain that health professionals from many different organizations are coordinating efforts to help keep Canadians safe from preventable diseases. This lesson sheds some light on these organizations.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

## FOR GRADES 4-12

### CANADA'S RESPONSE TO VACCINE HESITANCY ABROAD

A web article explains how Canada helps fight vaccine hesitancy around the world by building alliances and helping other countries dispel myths and vaccine misinformation. Two examples are provided to illustrate Canada's role in this.

The first example is the Vaccine Safety Net (VSN), formed by the World Health Organization (WHO) in 2003 to identify websites that provide reliable information on vaccine safety. The VSN is a global network of over 60 websites in 16 languages across 28 countries.

The VSN websites are evaluated by the WHO to ensure that they provide accurate information on vaccine safety. The rules are strict and it's not easy to get approved. This way, it can be easy for people around the world to identify if a website is trustworthy.

A 2-minute video, "What is the WHO Vaccine Safety Net" created by the World Health Organization" (WHO).

Gavi (formerly the Global Alliance for Vaccines and Immunizations) is an international organization that brings together government, NGOs, for-profit companies, and inter-governmental organizations. A 5-minute video, "A Gavi Pledging Conference - 2015" from MSNBC, helps provide better understanding around this.

SUPPORTING LEARNING	ASSESSMENT
Explain that Canada helps fight vaccine hesitancy around the world by building alliances and helping other countries dispel myths and vaccine misinformation.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 4-12**  
**CASE STUDY: PREVENTING CANCER**  
**WITH A VACCINE - CANADA VS RWANDA**

Canada’s health system is compared to that of a low-income country: Rwanda, Africa. Despite Canada being a wealthy country known to have good public healthcare, Rwanda has a 93% vaccination rate for the human papillomavirus (HPV) compared to Canada’s 70%.

SUPPORTING LEARNING	ASSESSMENT
Explain how Canada may seem like one of the healthiest countries, but when it comes to children receiving certain vaccines, that is not the case. Rwanda is challenged by poverty and healthcare infrastructure, but is doing a better job.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 4-12****NEW DISEASES ON TURTLE ISLAND**

This lesson includes a story describing the historical impacts of vaccine preventable diseases on Indigenous people in BC, with a focus on smallpox and an epidemic in 1862. Dani asks her family why she needs to get a needle (immunization) at school. She learns some history from an Elder in her community and her aunt, who is a community health nurse. The story ends by describing the resiliency of Indigenous peoples, despite the loss of so many people to diseases that can now be prevented by vaccines. It includes original illustrations by Shawna Duncan. The words above the door on the original illustration mean "Hi Everybody" in the Cree language.

SUPPORTING LEARNING	ASSESSMENT
Introduce the lesson by explaining that this is a story about a girl who is curious about why she needs to get immunized at school, and she ends up learning about history and the impacts of serious diseases, like smallpox, in the past. The words above the door on the drawing say "Hi Everybody" in the Cree language. The story writer and artist is a Cree and English woman who lives in British Columbia.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 7-12****WHAT ARE INFECTIOUS DISEASES AND HOW DO THEY SPREAD?**

A web article explains how infections are spread through the air, by touching something someone has touched, through direct contact, through contaminated food or water, and by some insects and animals. Includes images.

SUPPORTING LEARNING	ASSESSMENT
Explain that diseases are spread in so many ways: through the air, through direct contact, through indirect contact, and through contaminated food or water, and through animals and insects. We're surrounded by disease, so let's learn how to fight it.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 4-12****WHAT ARE OUTBREAKS, EPIDEMICS AND PANDEMICS?**

A short web article explains the differences between outbreaks, epidemics and pandemics. An 8-minute Ted Talk video looks at pandemics, how they spread, and how to prevent them.

SUPPORTING LEARNING	ASSESSMENT
Introduce the lesson explaining that infectious disease outbreaks are a regular occurrence and these can become very serious.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 7-12****HOW CAN WE PREVENT THE SPREAD OF INFECTIOUS DISEASES?**

This interactive web article provides an illustrated guide on washing hands properly, which reduces the spread of infections by 80%.

SUPPORTING LEARNING	ASSESSMENT
Explain that washing hands properly is one of the best ways to stop spreading infections. This protects yourself and others up to 80%. That's huge!	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 7-12****AN INVESTIGATIVE ACTIVITY:****FRASER VALLEY MEASLES OUTBREAK**

Students take on the role of journalist and are presented with different data sources on the BC Fraser Valley measles outbreak that began in March of 2014, in a small community that had low vaccination rates. Students analyze the information and create a journal blog about the outbreak, based on:

- Media articles
- Interviews with a public health nurse
- Descriptions about the spread of the measles and the measures for containment

SUPPORTING LEARNING	ASSESSMENT
Introduce the lesson by explaining that the students are going to report on the BC Fraser Valley Measles Outbreak of 2014 and that they need to gather as many facts from the various data sources provided as they can. They will then write a journal blog to explain to a public audience what happened. Tell them to include key information and develop a logical flow to their story. Suggest having a partner edit punctuation, spelling, grammar, etc. before handing in.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADE 6 ONLY****AN INQUIRY ACTIVITY: BECOME AN OUTBREAK INVESTIGATOR**

This cross-curricular inquiry activity lets students learn about health when they become an outbreak investigator looking at a measles outbreak that has occurred in a local elementary school. Students work through a series of scenarios and tasks using language arts skills as they build vocabulary and write reports on their findings. For each task, students are given data as well as specific math problems that need to be solved. The activity finishes with the outbreak investigator communicating their understanding through a creative presentation.

SUPPORTING LEARNING	ASSESSMENT
Support materials are being developed for this learning activity and can be found in Appendix A - Worksheets & Marking Rubrics. The Teacher Guide is regularly updated on the KBI site as materials are added. <a href="http://www.kidsboostimmunity.com">www.kidsboostimmunity.com</a>	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

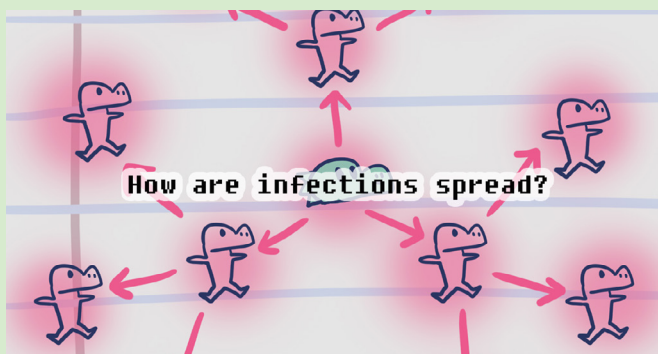

**FOR GRADES 4-6****WHAT ARE GERMS?**

Web article explains about germs and the body's natural defences. Includes cartoon images.

SUPPORTING LEARNING	ASSESSMENT
Introduce the lesson by explaining that students are learning about germs and infections because in schools, students receive a number of vaccines that protect them against some really bad infections/diseases.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 4-6****HOW ARE INFECTIONS SPREAD?**

A web article explains how infections are spread through the air, by touching something someone has touched, through direct contact, through contaminated food or water, and by some insects and animals. Includes images.

SUPPORTING LEARNING	ASSESSMENT
Introduce the lesson by explaining that infections are not easy to see so it is important to know how they are spread.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 4-6****WHAT'S THE BEST WAY TO STOP SPREADING INFECTIONS?**

This interactive web article provides an illustrated guide on washing hands properly, which reduces the spread of infections by 80%.

SUPPORTING LEARNING	ASSESSMENT
Introduce the lesson explaining that everyone can lower their chance of getting an infection by 80%.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

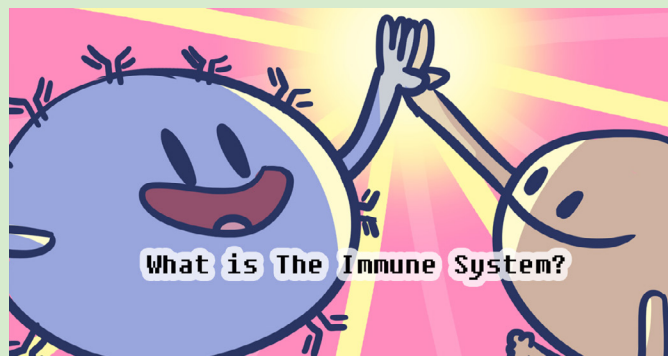

**FOR GRADES 4-6****WHAT ELSE CAN STOP THE SPREAD OF INFECTIONS?**

A web article explains other ways to stop the spread of infections including avoiding touching mouth, eyes and nose, staying home when sick, keeping vaccines up to date, cleaning where germs are likely to be found, and preparing food safely. Includes images.

SUPPORTING LEARNING	ASSESSMENT
Introduce the lesson by explaining that there are a number of things that we can do in addition to washing hands properly to prevent the spread of infections.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 4-6****WHAT IS THE IMMUNE SYSTEM?**

This interactive web article uses the metaphor of a castle to explain how the human body uses white blood cells to fight off infections. Students can also read the scientific explanation. Includes cartoon images.

SUPPORTING LEARNING	ASSESSMENT
Introduce the lesson by explaining that students are going to learn about how the human body has its own way of fighting off infections. Some really bad diseases require protection through vaccines, and students will learn about some of these vaccines later.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 4-6****WHAT ARE VACCINES AND HOW DO THEY WORK?**

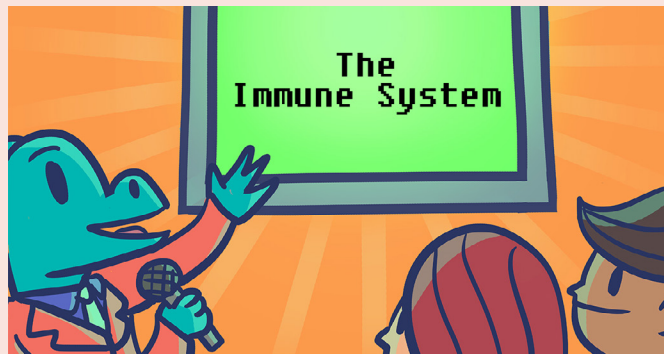

A web article explains how in Canada between 1949 -1957 11,000 people were paralyzed by polio. Thankfully, scientists knew how the immune system works and were able to create a vaccine so we no longer worry about getting polio in Canada. Vaccines and how they work are explained. There is an infographic that shows how well vaccines work.

SUPPORTING LEARNING	ASSESSMENT
Introduce the lesson explaining that people need medical help to fight certain bad infections/diseases like polio, measles, smallpox, and many others that the students will learn about.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 7-12****THE IMMUNE SYSTEM**

Web article that explains the functions of the immune system looking at cells, organs, and tissues.

SUPPORTING LEARNING	ASSESSMENT
Introduce the immune system by reading the web article provided. You may want to have students record the explanations for the capitalized words, as they are the focus of the quiz questions.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 7-12****THE INNATE IMMUNE SYSTEM**

A short web article explains that the innate immune system is our body's first line of defence against pathogens. A 3-minute video from Crash Course covers phagocytes, neutrophils, macrophages, and killer cells. The whole video is 9 minutes long if students elect to watch it all.

SUPPORTING LEARNING	ASSESSMENT
This lesson is self-explanatory. The quiz is to be completed after reading the web article and viewing the video.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 7-12****THE ADAPTIVE IMMUNE SYSTEM**

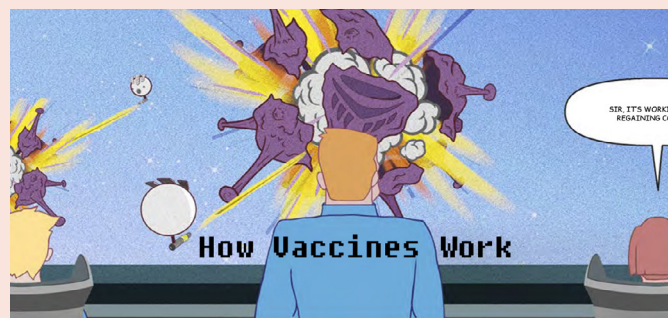

A short web article explains that the adaptive immune system is our body's second line of defence against pathogens. Antigens and B and T cells are explained in a way grade 8 students will understand. This includes a 2-minute video from Crash Course. The whole video is 9 minutes long if students elect to watch it all.

SUPPORTING LEARNING	ASSESSMENT
This lesson is self-explanatory. The quiz is to be completed after reading the web article and viewing the video.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

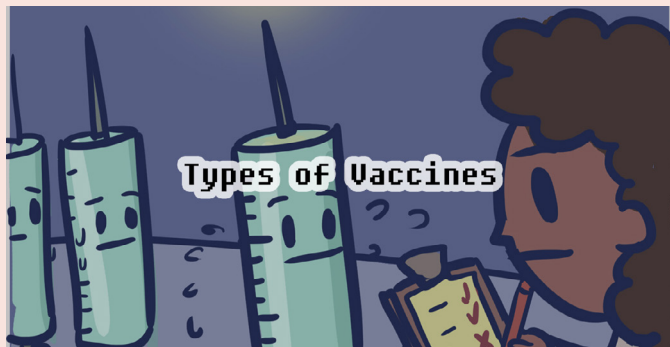

**FOR GRADES 7-12****HOW VACCINES WORK**

A short web article introduces key terms. A 4-minute video from YouREKA Science describes vaccines and how they work. The visual representation of key terms is excellent for supporting student learning. Immunity Warriors is a 12-minute motion comic from canimmunize.ca that uses a metaphorical zombie war to explain how vaccines work.

SUPPORTING LEARNING	ASSESSMENT
After reading/viewing the lesson, students may want to create an artistic representation of part or all of the immune system i.e., develop a metaphor, rap, song, picture, etc.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

### FOR GRADES 7-12

## TYPES OF VACCINES

A web article and a 4-minute TED Talk video that describes how different types of vaccines are made including live attenuated vaccines, inactivated vaccines, and subunit vaccines.

SUPPORTING LEARNING	ASSESSMENT
Introduce the lesson by explaining that the science behind vaccines is interesting and there are a number of ways that vaccines are created.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

### FOR GRADES 7-12

## HOW EFFECTIVE ARE VACCINES?

A short web article outlines the success rate of vaccines in Canada. A vaccine infographic poster from the Public Health Agency of Canada illustrates the effectiveness of vaccines. This compares the number of cases of vaccine-preventable diseases before and after the introduction of the vaccine.

SUPPORTING LEARNING	ASSESSMENT
If possible, put this poster up in the classroom/school.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 4-12****WHAT ARE ANTIBIOTICS AND HOW DO THEY WORK?**

A short web article provides some history on how penicillin, the first antibiotic, was accidentally invented. Two short videos from the BC Centre for Disease Control (BCCDC) discuss the importance of antibiotics.

SUPPORTING LEARNING	ASSESSMENT
The reading level should work for all grades, although it is suggested that the lesson be read aloud to grade 4-5 students. Provide clarification on any words that are unknown, prior to students taking the quiz.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 4-12****ANTIBIOTIC RESISTANCE**

A web article describes what antibiotic resistance is, how it occurs, why it is a concern, and how we can prevent it. Four short videos from the BC Centre for Disease Control (BCCDC) are provided.

SUPPORTING LEARNING	ASSESSMENT
Introduce the lesson by explaining that if antibiotics are not taken properly, they can stop having any effect because bacteria become resistant to them. The reading level is too advanced for grades 4-5 and therefore the lesson should be read aloud to students. A few words can be simplified. For example, "eliminate" could be phrased as "stop". The videos reinforce the key message and these strategies will be enough to prepare younger students for the quizzes.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 4-12****THE SURPRISE GUEST**

This lesson includes a story based on the personal history of Elder Fred John and the impact of tuberculosis (TB) on his family. It includes content related to the history of Indigenous peoples at residential schools and Indian hospitals in Canada. The story explains what TB is, how it is transmitted, treatment before and after the discovery of antibiotics, antibiotic resistance, and the need for antibiotic stewardship. Includes original illustration by Shawna Duncan. This story is based on the personal history of Elder Fred John from the Xaxli'p [pronounce HAA-clip] First Nation in British Columbia.

SUPPORTING LEARNING	ASSESSMENT
Explain that this lesson on tuberculosis is based on the personal history of Elder Fred John from the Xaxli'p [pronounce HAA-clip] First Nation in British Columbia.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 4-12****ANTIBIOTIC STEWARDSHIP AND VACCINES**

This web article uses whooping cough (pertussis), a bacterial infection, to illustrate how antibiotics, as well as a pertussis vaccine developed in the 1960s, practically eradicated the disease. However, a decade later, whooping cough came back because people were unfamiliar with the disease and not enough children were being vaccinated. Using Great Britain as an example, deaths from whooping cough were close to zero in the 1960s. Unfortunately, by the 1970s, people started to forget how successful the vaccine had been in combating this serious disease. As a result, immunization rates went down from about 80% to 30%, and in some places rates were as low as 10%! This resulted in more than 100,000 cases and at least 36 deaths in Great Britain alone.

To further expand on this topic, there is a 4-minute TEDEd video, "What Causes Antibiotic Resistance?" by Kevin Wu to explain the proper use of antibiotics.

SUPPORTING LEARNING	ASSESSMENT
Introduce the lesson by explaining that students will learn the term "antibiotic stewardship". They will also learn how sometimes, both vaccines and antibiotics are needed to treat a disease.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

**FOR GRADES 4-12****THE GOOD, THE BAD, THE ANTIBIOTIC**

This web article discusses germ prevention such as handwashing with regular soap (not antibacterial soap), and explains that antibiotics only work against infections caused by bacteria. It shows how necessary part of antibiotic stewardship is not using antibiotics for infections caused by a virus, like the common cold and flu (influenza). Using antibiotics wisely helps to keep the good bacteria in your body. That is why you only use important antibiotic medicines when needed.

A 2-minute video, “Good Germs vs Bad Germs” helps explain this further.

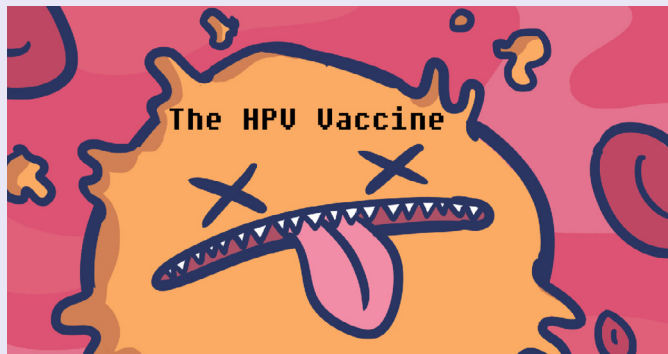

SUPPORTING LEARNING	ASSESSMENT
Introduce the lesson explaining the proper use of antibiotics is a really important	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

FOR GRADE 7 ONLY  
 HOW TO HANDLE YOUR SHOTS  
 LIKE A CHAMP

Immunization Day is coming! This short web article is for students to learn about vaccines (also called shots) and what they can do to make Immunization Day easier. It includes a 4-minute video called “School Vaccinations – What you need to know about vaccines at school” developed by SickKids Ontario.

SUPPORTING LEARNING	ASSESSMENT
Explain that nurses, schools, and families work together to protect children against preventable diseases by making vaccines available in school on Immunization Day. Being informed about how vaccines work, that they are safe, and learning about the diseases that can occur without getting the vaccine is important knowledge for students to gain as part of Immunization Day. For some, getting “shots” can be stressful and students will get some tips to help with that.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

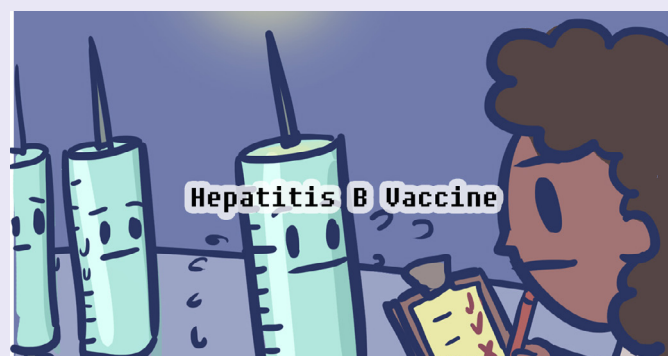

## FOR GRADE 7 ONLY HUMAN PAPILLOMAVIRUS (HPV) VACCINE

This short web article on HPV and three-minute video were developed by the Cancer Council Victoria, Australia, and New Zealand Ministry of Health called “HPV vaccine for teenagers”.

SUPPORTING LEARNING	ASSESSMENT
Introduce the lesson explaining that students are going to learn about the Human Papillomavirus (HPV). A surprising fact is that 75% of adults get a form of HPV and this sometimes leads to cancer. This is why it is important to learn more about it. HPV is sexually transmitted and the vaccine is best given at a young age, which is why they are studying it now.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

## FOR GRADE 7 ONLY HEPATITIS B VACCINE

Web article on Hepatitis B. 6-minute video developed by ImmunizeBC illustrates how hepatitis B affects the body and how to protect against it.

SUPPORTING LEARNING	ASSESSMENT
Introduce the lesson by explaining that students are going to learn about the Hepatitis B vaccine that protects against a dangerous virus that attacks the liver.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

### FOR GRADE 7 ONLY TETANUS DIPHTHERIA AND PERTUSSIS (Tdap) VACCINE

This 4-minute video was developed by the Immune Hero Department of Health & Human Services, State Government of Victoria, Australia. “Everything a teen should know about the DTP vaccine”.

A web article explains the small differences between the information presented in the video for Australia and vaccine practices in Canada.

SUPPORTING LEARNING	ASSESSMENT
Introduce the lesson by explaining that students are going to learn about the tetanus, diphtheria, and pertussis vaccine, which protects against these three diseases.	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

### FOR GRADE 7 ONLY MENINGOCOCCAL VACCINE (MENINGITIS)

This lesson includes a short web article about the meningococcal infection, which is caused by different bacteria types and a 2-minute video from Toronto Public Health. Permanent complications of some meningococcal infections include brain damage, deafness, and loss of limbs.

SUPPORTING LEARNING	ASSESSMENT
Introduce the lesson by explaining that students are going to learn about meningococcal vaccines that protect against dangerous infections such as meningitis (infection in the lining of the brain) and septicemia (infection of the blood).	This lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80%. Students can retake the lesson quiz as many times as they want until they earn the vaccine.

## BONUS CONTENT

This section is a good place to find a variety of extra content that provides students with other learning materials. Different types of content that might be available are described below.

### Additional Lessons/Quizzes

Lessons/quizzes that don't quite fit the topics on the KBI site will be provided here.

### Career Connections

KBI will be adding various career profiles related to the field of health.

### Correspondence

Sometimes groups such as UNICEF Canada, send us an update. For example, last year KBI received a letter from UNICEF highlighting the impact that donated vaccines had on children around the world. UNICEF Canada thanked all of the students on KBI for their contribution. This included photographs of some of the children who had received vaccines.

### Current Relevant News

There might be news items that will be highlighted and turned into a lesson. For example:

- A sporting event and how athletes are trying to stay healthy
- Recent disease outbreaks
- Information about health vaccines

### Relevant Stories

There might be stories of interest to students such as stories about new movies, games, etc.

PAGES 43-55 CONSIST OF NOTE-TAKING WORKSHEETS AND MARKING RUBRICS FOR LESSONS OUTLINED BELOW. USE/ADAPT AS NEEDED.

## FOR GRADES 4-7 CROSS-CURRICULAR INQUIRY RESEARCH ASSIGNMENT

### Research Topics

1. Create a virtual tour of municipal, provincial, and federal government services related to keeping you safe from infectious diseases.  
**pages 43-45**
2. Describe the actions you think we should take to eliminate (get rid of) global inequality in immunization.  
**pages 46-48**
3. If you were Prime Minister, how would you solve the issue of misinformation?  
**pages 49-51**
4. Create a poster of some of the things you can do to keep yourself healthy from diseases. **None.**
5. As an evil villain, you just got caught promoting a campaign trying to get everyone as sick as possible, and you have to write an apology letter to the world.  
**pages 52**
6. An Indigenous story writer worked with Elders to share stories about Turtle Island. Explore the themes in these stories.  
**pages 53**
7. Create a world map highlighting some of the impacts of infectious diseases.  
**pages 54**

## FOR GRADES 7-12 FRASER VALLEY MEASLES OUTBREAK

Students take on the role of journalist and are presented with different data sources on the BC Fraser Valley measles outbreak that began in March of 2014, in a small community that had low vaccination rates. Students analyze the information and create a journal blog about the outbreak, based on:

- media articles
- interviews with a public health nurse
- descriptions about the spread of the measles and the measures for containment

**pages 55**

## Research Topic 1 NOTES

**Create a virtual tour of municipal, provincial, and federal government services related to keeping you safe from infectious diseases.**

Grade 4/5 - Identify **four** or more services from at least two government levels (municipal, provincial, federal)

Grade 6/7 - Identify **six** or more services from three government levels (municipal, provincial, federal)

NAME

Type of Service	Level of Govt.	Service Provided	Importance?
Identify the type of health service. For Example: <ul style="list-style-type: none"> <li>Physical activity</li> <li>Mental wellness/support</li> <li>Nutritional - food/drink</li> <li>Substance abuse: alcohol &amp;/or drug use</li> <li>Medical conditions: diabetes, heart health, cancer, others</li> </ul>	Identify the level of government that this service is offered. Some services may be offered at different levels and they will do different things: <ul style="list-style-type: none"> <li>Municipal</li> <li>Provincial</li> <li>Federal</li> </ul>	Describe what is provided by the service. Consider: <ul style="list-style-type: none"> <li>What ages of people get the service? Children, teens, adults, seniors?</li> <li>How often do people have to get the service? Weekly, monthly, when needed?</li> <li>Where do people go to get the service?</li> </ul>	How important do you think this service is? Choose from the following ratings: <ul style="list-style-type: none"> <li>Very important</li> <li>Important</li> <li>Kind of important</li> <li>Not important</li> </ul> Give clear reasons for your rating

# MARKING RUBRIC Grade 4/5

<b>Research Topic 1</b> Identify <b>four</b> or more services from at least two government levels (municipal, provincial, federal) that help keep us safe from infectious diseases					
Name			Date

<b>TOTAL</b>					

## Research Topic 2 NOTES

**Describe the actions you think we should take to eliminate (get rid of) global inequality in immunization.**

Grade 4/5 - Identify at least **3 causes, impacts (ways children are affected) and suggest actions** that can help

Grade 6/7 - Identify at least **5 causes, impacts on children, and suggest actions** that can help

NAME \_\_\_\_\_

Causes of Global Inequality	Impact on Children	Organization that Help	Other Action Suggestions
Describe causes of global inequality in immunization . Some things to consider: <ul style="list-style-type: none"><li>• geographical limitations</li><li>• political problems</li><li>• war and violence</li><li>• lack of funding and poverty</li></ul>	Explain how not being able to get certain vaccines affects children. Describe diseases that children who don't have access to health-care might catch. How might this affect a child's <ul style="list-style-type: none"><li>• schooling?</li><li>• activities?</li><li>• future?</li></ul>	Identify a few organizations that help. Describe what these organizations do. They might be: <ul style="list-style-type: none"><li>• NGOs (non-government organizations)</li><li>• international or global organizations</li><li>• national organizations</li></ul>	What other suggestions do you have that could help? Be creative. If you were a world leader, what would your wish list be?

<b>Research Topic 2</b> Identify at least <b>3 causes, impacts (ways children are affected) and suggest actions</b> that can help					
Name			Date		
<b>Blog Post/News Article</b>					
	<b>0</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>
<b>Title</b>	No title	Partial/ incomplete title	Title is present but not clear, spelling or capitalization are incorrect	Title is correctly and neatly written	Title is written correctly and creatively captures topic
<b>Causes of global inequality in immunization</b>	No causes are identified	1 cause is partially identified and described	2 causes are identified and described some- what (1-2 sentences each)	3 causes are identified and described somewhat (1-2 sentences each)	3 or more causes are identified and described in detail
<b>Ways children are affected by not being immunized</b>	Nothing is described	1 way children are affected is partially described	2 ways children are affected are described in some detail (1-2 sentences for each)	3 ways children are affected are described in some detail (1-2 sen- tences for each)	4 ways children are affected are described in detail (3 or more sentences for each)
<b>Organizations that help</b>	No organization is identified	1 organization is identified and partially described	2 organizations are identified and partially described	3 organizations are identified and described	3 or more organi- zations are identified and described in detail
<b>Other action suggestions</b>	No suggestion given	1 suggestion is partially explained	2 suggestions are partially explained	2 suggestions are- clearly explained	2 or more suggestions are clearly explained and show thought and creativity
<b>TOTAL</b>					

## MARKING RUBRIC Grade 6/7

Research Topic 2 Identify at least <b>5 causes, impacts on children, and suggest actions</b> that can help					
Name			Date		
<b>Blog Post/News Article</b>					
	<b>0</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>
<b>Title</b>	No title	Partial/ incomplete title	Title is present but not clear, spelling or capitalization are incorrect	Title is correctly and neatly written	Title is written correctly and creatively captures topic
<b>Causes of global inequality in immunization</b>	No causes are identified	1-2 causes are partially identified and described	3 causes are identified and described in some detail (1-2 sentences each)	4 causes are identified and de- scribed in detail ( 2-4 sentences each)	5 or more causes are identified and are creatively described in way that is engaging
<b>Ways children are affected by not being immunized</b>	Nothing is described	1-2 ways children are affected are partially described	3-4 ways children are affected are described in some detail (3 sentences for each)	3-4 ways children are affected are described in detail and meaning is clear	5 or more ways children are affected are described in detail and meaning is clear
<b>Organizations that help</b>	No organization is identified	1 organization is identified and partially described	2 organizations are identified and partially described	3 organizations are identified and described	3 or more organi- zations are identified and described in detail
<b>Other action suggestions</b>	No suggestion given	1-2 suggestions are partially explained	2 suggestions are explained so they are somewhat clear	3 suggestions are- clearly explained	4 or more suggestions are clearly explained, and show thought and creativity
<b>TOTAL</b>					

## Research Topic 3 NOTES

**If you were Prime Minister, how would you solve the issue of misinformation?**

Grade 4/5 - Find at least **2 examples of misinformation** and **describe actions** you would take to fix this

Grade 6/7 - Find at least **4 examples of misinformation** and **create an action plan to solve the issue**

NAME \_\_\_\_\_

Examples of Misinformation	Ways to Check Information	Canada's Fight Against Misinformation	Other Action Suggestions
<p>Misinformation is defined as false or inaccurate information, especially that which is deliberately intended to cause people to believe something that is not true. Typically this is done in order to gain some personal advantage. Here are some ways misinformation might be used:</p> <ul style="list-style-type: none"> <li>• getting people to spend money on something</li> <li>• persuading others to like a product or group</li> <li>• causing others harm</li> </ul>	<p>One way to check for misinformation is to think critically. Also, use the TRAAP Test checklist. Describe these strategies..</p>	<p>Identify a few organizations that help fight misinformation. Describe what they do. They might be:</p> <ul style="list-style-type: none"> <li>• NGOs (non-government organizations)</li> <li>• international or global organizations</li> <li>• national organizations</li> </ul>	<p>What other suggestions do you have that could help? Be creative. If you were a world leader what would your wish list be?</p>

Research Topic 3 Find at least <b>2 examples of misinformation</b> and <b>describe actions</b> you would take to fix this					
Name		Date			
<b>Campaign Platform or Poster or Research Essay</b>					
	<b>0</b>	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>
<b>Title</b>	No title	Partial/ incomplete title	Title is present but not clear, spelling or capitalization are incorrect	Title is correctly and neatly written	Title is written correctly and creatively captures topic
<b>Causes of global inequality in immunization</b>	No causes are identified	1 cause is partially identified and described	2 causes are identified and de- scribed in some detail (1-2 sentences each)	3 causes are identified and described in some detail (1-2 sentences each)	3 or more causes are identified and described in detail
<b>Ways children are affected by not being immunized</b>	Nothing is described	1 way children are affected is partially described	2 ways children are affected are described in some detail (1-2 sentences for each)	3 ways children are affected are described in some detail (1-2 sen- tences for each)	4 ways children are affected are described in detail (3 or more sentences for each)
<b>Organizations that help</b>	No organization is identified	1 organization is identified and partially described	2 organizations are identified and partially described	3 organizations are identified and described	3 or more organi- zations are identified and described in detail

<b>Quality of writing</b>	Nothing developed	Partially developed but lacks an introduction, parts are missing, there are many writing errors, poorly organized	Some grammar & punctuation errors, organization and meaning are somewhat clear, actions is underdeveloped	Minor grammar & punctuation errors, overall it is well thought out, includes some actions	Minimal grammar or punctuation errors, organiza- tional flow and content are creatively developed and are engaging through- out, strong ending around action
<b>TOTAL</b>					

## Research Topic 5 NOTES

**As an evil villain, you just got caught promoting a campaign trying to get everyone as sick as possible by spreading misinformation about infectious diseases. You've now been ordered to write an apology letter to the world. In your apology letter you must include what your plan was, what kind of wrong things you suggested to the people, and why that was wrong. Remember to apologize at the end!**

NAME \_\_\_\_\_ Use sections below to make planning notes for your letter

<b>Be creative</b>	Think of a creative way to fool people into believing misinformation that would get them sick. For example, maybe you created a super laser that could write messages in the sky, and you used it to write misinformation about vaccines. Or maybe you replaced famous youtube creators with clones that spread lies!	
<b>Greeting</b>	Your audience is everyone in the world. How will you address them?	
<b>Give details about how you came up with the plan</b>	How long have you been planning? What influenced or motivated you to develop this plan? Did you aim to start small in one or two countries, or was your plan global from the start? Explain the details of how you intended to make this happen on such a large scale. Consider levels of government and services you might have involved.	
<b>What wrong things did you suggest?</b>	What kind of misinformation did you plan to spread? Was it related to one specific infectious disease or a number of them? Provide details about the specific infectious disease(s) you created misinformation for. What would have happened to people if they had got sick. How long would it have taken them to start getting sick? What would their symptoms have been. Might some people have died from the infectious disease(s).	
<b>How can people stay healthy?</b>	Explain what people should do instead of what you suggested, to keep themselves healthy.	
<b>Apology</b>	Remember to apologize at the end!	

## Research Topic 6 NOTES

**An Indigenous story writer worked with Elders to share stories about Turtle Island. Explore the themes in these stories. Write a research essay or create an illustration.**

NAME

Describe Turtle Island and Indigenous Peoples before the arrival of Europeans and colonization.

What were some of the diseases that Europeans brought to Turtle Island? Why were these new diseases so deadly?

Describe one action you can take to keep you healthy for each of the following: mental, spiritual, emotional and physical health.

Why does the First Nations Health Authority include culture in their approach to healthcare?

Other Ideas:

## Research Topic 7

### Create a world map highlighting some of the impacts of infectious diseases

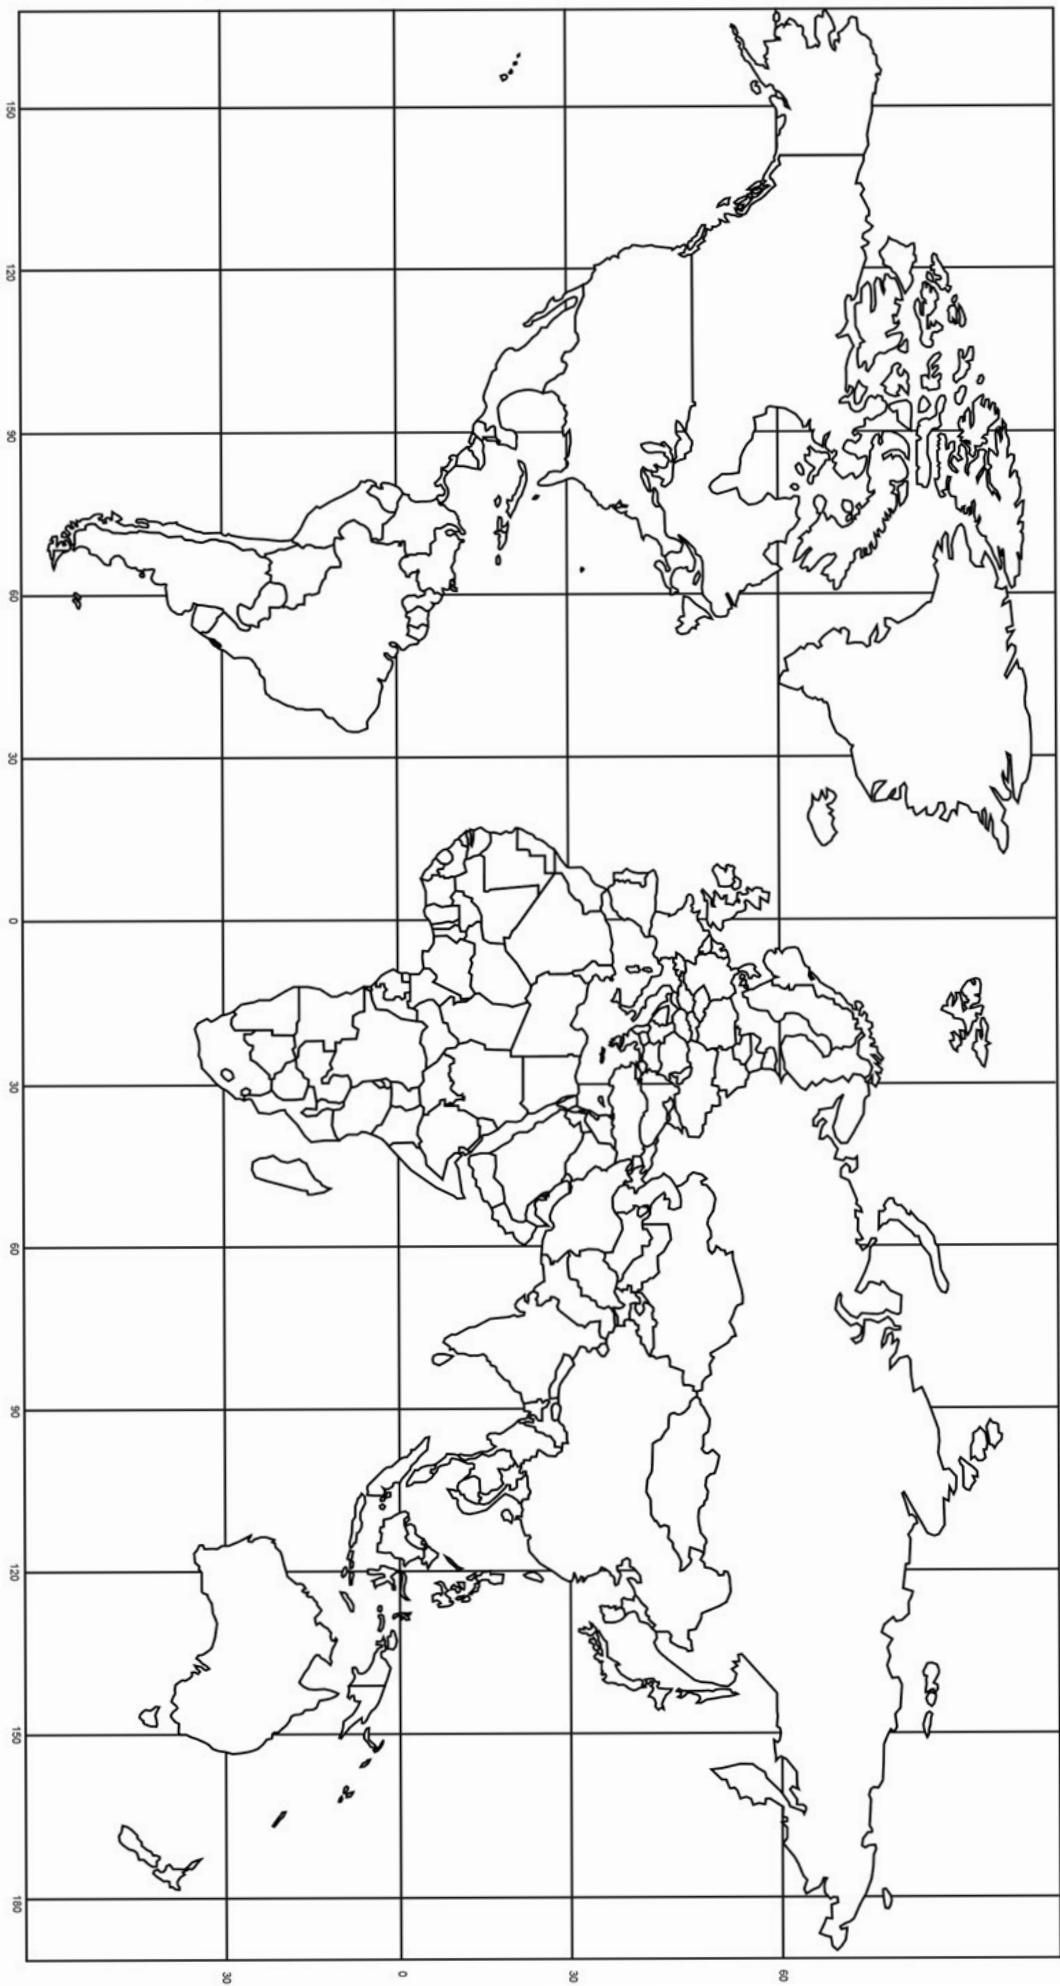

NAME \_\_\_\_\_

There are many stories from around the world about the impact of infectious diseases.

Grade 4/5 choose at least 3 to highlight.

Grade 6/7 choose at least 5 to highlight.

1. Identify the name and location of each story on this world map, showing the longitude and latitude.
  2. Write a short summary about each story on the map. Get a partner to edit, and hand-in computer printed or neatly written final copy.
- Suggested for Grade 4/5 – write at least 5 sentences for each. Think about where and when it happened and when it ended, how it started, in what ways people got sick, and what kind of medical help was given, if any.
- Suggested for Grade 6/7 – write half a page for each. Consider geographic, social, and economic conditions that might have been a factor. How many of the population were affected? What health measures were put in place? How effective were these?

### Investigative Activity - Fraser Valley Measles Outbreak

You are a reporter for your school blog. Produce a print or digital report explaining your understanding of the Fraser Valley measles outbreak of 2014. Remember to provide evidence to support your findings. This sheet may be helpful to organize some of the information.

NAME

What is measles?

What constitutes an outbreak?

What caused the Fraser Valley measles outbreak?

How far geographically did the outbreak spread?

How long did the outbreak last?

How did the health sector respond ?

What did we learn and how can we prevent it from happening again?

## NAVIGATING YOUR WAY ON KIDS BOOST IMMUNITY

This is a quick overview of the basic functions on KBI. We also provide more detailed instructions and cover advanced functions which can be found under the Teacher's Guide menu item on the KBI site.

## CREATING AN ACCOUNT

Go to [www.kidsboostimmunity.com](http://www.kidsboostimmunity.com) and click the **REGISTER** button on the top right of the screen.

Click **Create new account**

Select **teacher/student teacher**

**Check** "I confirm I am a teacher/health-care worker over 19 years of age."

Complete the rest of the information (name, school, etc.)

Then select **Create new account**.

To register as a teacher, please fill out the teacher option in the registration form that includes your email address. If possible, please use your school email as general emails (gmail, windows live, etc.) take longer to verify for approval. NOTE - if this is an issue contact us at [info@kidsboostimmunity.com](mailto:info@kidsboostimmunity.com).

To finish the approval process, we will be sending an email to verify your email address. You will need to click on a link in the email. It's super easy! If you don't receive the email, make sure to check your junk/spam folders. If you still don't see it, please email us at [info@kidsboostimmunity.com](mailto:info@kidsboostimmunity.com). Once you have verified your email address, it can take up to two business days to be approved, giving you full site access. This is a one-time registration process. You will not have to sign-up every year.

## VIEWING THE LESSONS

To view lessons click on LESSONS on the top left. Here you will be prompted to **select a grade**. Different grades are shown different lessons specifically designed to meet curriculum outcomes by subject. All teachers, regardless of the grade they are teaching, are able to see all lessons in all grades.

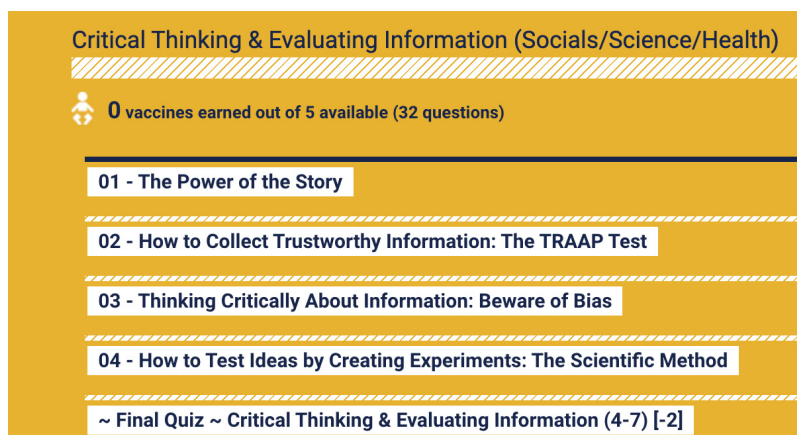

**NOTE - students do not have the same view as teachers. Students can only see the lessons for their grade.**

Once you have selected a grade, you will see a list of different topics.

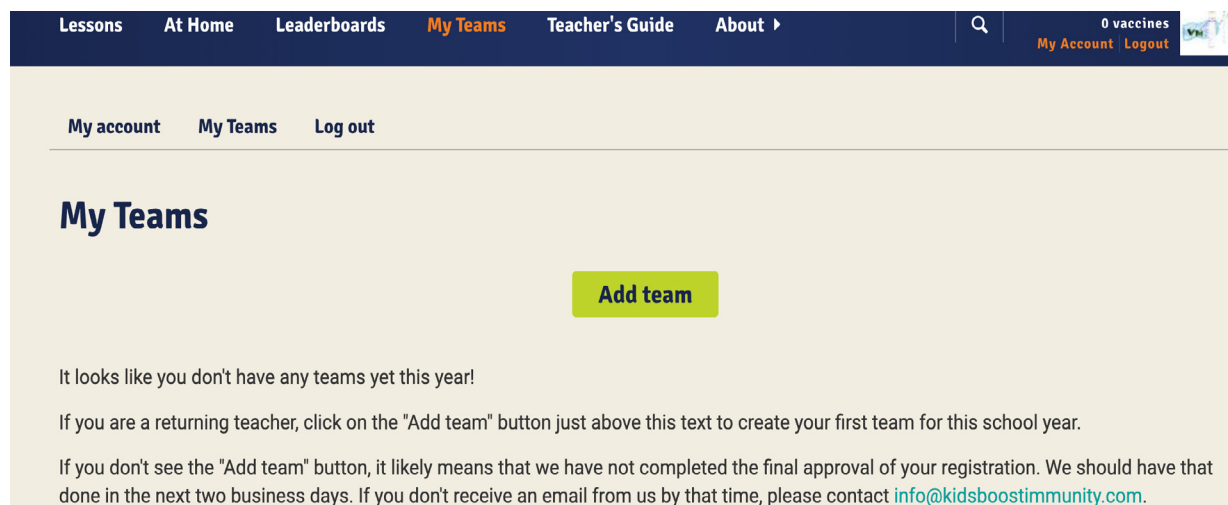

When you click on a topic, the lessons for that topic appear below.

Click on a lesson, and away you go!

## MAKING A TEAM

In order for students to use Kids Boost Immunity, teachers must create a team for their class(es). To do this, go to **My Teams** and click on the **Add Team** button. See below.

To create a team you will be asked to fill out a form. This just take a few minutes to complete.

### Title

Choose a name for your team. Be creative and unique as this name will show up on the leaderboard.

**Examples of unique team names:** Garfields Great Lasagna, Portleys Pelicans 7.

### School

**VERY IMPORTANT!** Make sure to select your correct school. This affects the lessons that will be offered to students on this team. If you mistakenly select a school which happens to be in a different province (such as a school that has a similar name) students will be shown the wrong lessons.

### Team description (optional)

You might want to add a fun description. This can be seen by anyone who has access to the site.

### Team image (optional)

You might want to add an image. Please select an image that does not personally identify any of the team members.

### Team size

Please fill-in the number of students that will be on this team. There is a maximum of 35. Try to be as accurate as you can. Some students attempt to sign-up multiple times. This raises our costs for operating the site, so we appreciate when teachers keep an accurate count. There have also been instances where students to thre wrong team by accident. An accurate count mitigates this issue.

**Team registration code**

Students will require a “Team Registration Code” when registering for KBI. The team registration code determines the team a student will join. Avoid common words or phrases (e.g. science1). Common phrases will increase the likelihood that a student will end up on the wrong team.

You will be asked to make a unique phrase that is specific for just THIS TEAM, and that is at least 5 characters long. The team registration code will be a combination of your last name and this unique phrase.

**Team registration code \***

Students will require a “Team Registration Code” when registering for KBI. The registration code determines the team a student will join. Avoid common words or phrases (e.g. science1). Common phrases will increase the likelihood that a student will end up on the wrong team.

This team's registration code is your last name + your unique phrase.

Enter your unique phrase: 12345

**THIS TEAM'S REGISTRATION CODE IS BELOW:**

**teacher-12345**

**Grade**

Make sure to select the correct grade. This affects the lessons that will be offered to students on this team.

**Leaderboard settings**

When students go to this team’s page, they will see a leaderboard for this specific team. As the teacher, you can adjust what is shown on this leaderboard. You can choose from the following options:

- List all students
- List Top 10 students
- Do not display leaderboard

## STUDENT SIGN-UP

In order for students to use Kids Boost Immunity, they must be registered to a team. Please refer to the instructions for how to “Make a Team” to create your own team.

Students can register by going to the **REGISTER** link (top right). They will fill out a very easy form. It takes about a minute.

The screenshot shows the registration page for Kids Boost Immunity. At the top is a dark blue navigation bar with links: "How It Works", "Sample Lessons ▶", "Testimonials", "Press", "Who We Are ▶", "LOGIN", and a blue "REGISTER" button. Below the navigation bar is a light beige section with three tabs: "Create new account" (active), "Log in", and "Request new password". The main heading is "User account". Under "Account type", there are three radio buttons: "student" (selected), "teacher/student teacher", and "health care provider". Below this is the "First name \*" field with the text "John" and a note "Maximum 20 characters.". Then is the "Last name initial \*" field with the text "S". At the bottom, a small disclaimer states: "Your first name and last name initial are only accessible to your teacher and other students in your class who will be on your team. They are not accessible to other teachers, students from other teams or the public."

## TYPES OF QUIZZES

### Introduction Quiz

Students automatically get the introduction quiz when they start on KBI. Teachers and students can find the introduction quiz at any time at the top of the lesson dashboard. The introduction quiz explains how to use KBI.

### Trivia Quiz

Most topics have a very short, one-time trivia quiz. Students cannot earn vaccines doing these. All other lessons in that topic section are locked until students finish the trivia quiz. The trivia quiz serves as a pretest. This provides us with aggregate comparative data to help determine if on average, students are improving in knowledge. This information helps us in our reporting to our government funders. Without this type of evaluation, KBI might not be able to be offered for free to schools.

### Lesson Quiz

Each lesson is accompanied by a quiz. Students can earn a vaccine by scoring at least 80% on these quizzes. Students can retake the lesson quizzes as many times as they want until they earn the vaccine.

### Final Quiz

When students finish all the quizzes in a topic, students unlock a special quiz: Final Quizzes. Final Quizzes can let students earn extra vaccines if they do well! But they have to be careful - they can only earn vaccines for Final Quizzes the first time they take them.

### At Home Quiz

In addition to the lessons, there is extra content called "At Home" quizzes. These quizzes can be accessed by clicking on "At Home", on the main menu. These quizzes do not have a lesson attached and are just questions. Students can earn a vaccine by scoring at least 80% on these quizzes. Students can retake these "At Home" quizzes as many times as they want until they earn the vaccine.

## TESTIMONIALS

"I love how well the Kids Boost Immunity site aligns to the science unit. It's a great resource which helps the students understand the importance of vaccination."

Deborah, Grade 8 Science Teacher

"My students really loved using the KBI lessons. Not only were they proud of all the vaccines they raised for UNICEF, but it sparked important questions about why we get vaccines and how they protect us. I will definitely be using this for my students next year."

Janet, Grade 5 & 6 Socials Teacher

"They were able to work at their own pace and delve into subject material at any time. Many were keen to work after hours as well as during class time."

Dana, Grade 8 Science Teacher

"As soon as my classes realized they could actually help other children around the world by learning about concepts we would be studying anyway, they became very invested. A telling sign of student buy-in is when they continue to use the program and explore the site even after the activity is finished. Walking down the hall and hearing discussions about herd immunity or T versus B cells, I could tell that the learning would continue for my students because they had been given the opportunity to have a positive global impact with their efforts."

Heidi, Grade 7-9 Socials Teacher

"My students felt like global citizens learning about bacteria and viruses in class, then completing a quiz to earn a vaccine for a child in a developing country. Thank you for the opportunity to make a small difference in a big way."

Lisa, Grade 7 Science Teacher

They are excited. When I told them they can earn vaccines for others, their eyes lit up. They only had 15 minutes this class, but it was soooo engaging for them.

Thank you for this great resource!

Michelle, Grade 8 Science Teacher

"It was fun earning vaccines with the class, and it helped the students learn the curriculum. It also resulted in good discussions about health care in developing countries."

Geoff, Grade 8 Science Teacher

"It helped make us more aware of the importance and truth about vaccinations. We were educated and learned about the vaccinations we were given instead of someone just saying, "Come here and let me poke your arm!" We learn, and then earn, so others will have a fair turn."

Wendy, Grade 6 & 7 PE and Health Teacher

"My students and I enjoyed using Kids Boost Immunity because it's both science and health at the same time. There is a real world connection with public health campaigns or advocacy and science learning outcomes. Our next move will be to draw our understanding on the issue of immunization and how it could be shared on various digital platforms. Thanks KBI!"

Gigi, Grade 6-9 Science, Health, Education and Technology Teacher
